Outpatient Visit Note - Family Medicine

Patient	SMITH, JOHN	**MRN**	4471-2093
DOB / Age	03/14/1956 (66 y)	**Sex**	Male
Date	03/08/2023	**Provider**	Emily Carter, MD

Chief Complaint

Increased thirst and nighttime urination for about 2 months.

History of Present Illness

66-year-old man presents for evaluation of polydipsia and nocturia (2-3 times per night) for approximately 2 months. Reports mild fatigue. No weight loss, chest pain, or vision changes. Home blood pressure readings have been 'around 150s' per patient. Fasting labs drawn this morning (see separate lab report).

Past Medical History

No prior chronic conditions on record. Appendectomy (1978).

Medications

None.

Allergies

Allergies: Sulfonamide (sulfa) antibiotics - rash.

Social / Family History

Retired civil engineer. Former smoker, quit 1995 (15 pack-years). Alcohol 2-3 drinks/week. Father had type 2 diabetes and stroke.

Vital Signs

BP 152/94 mmHg (repeat 148/92) | HR 78 regular | Temp 98.2 F | SpO2 97% RA | Height 175 cm | Weight 84 kg | BMI 27.4

Physical Exam

Well-appearing. Heart regular rate and rhythm, no murmur. Lungs clear. Feet: intact sensation to monofilament, pulses palpable.

Assessment

1. Type 2 diabetes mellitus, newly diagnosed (HbA1c 8.4%, fasting glucose 168 mg/dL).
2. Essential hypertension.
3. Hyperlipidemia (LDL 142 mg/dL).

Plan

1. Start **metformin 500 mg by mouth twice daily** with meals.
2. Start **lisinopril 10 mg by mouth once daily**.
3. Start **atorvastatin 20 mg by mouth nightly**.
4. Diabetes education referral; dietary counseling given.
5. Annual diabetic eye exam referral.
6. Repeat HbA1c and BMP in 3 months.
