Hospital Discharge Summary

Patient	SMITH, JOHN	**MRN**	4471-2093
DOB / Age	03/14/1956 (68 y)	**Sex**	Male
Date	09/19/2024	**Attending**	David Kim, MD (Hospitalist)

Admission: 09/15/2024 **Discharge:** 09/19/2024 **Length of stay:** 4 nights **Disposition:** Home

Principal Diagnosis

Community-acquired pneumonia, right lower lobe.

Secondary Diagnoses

Type 2 diabetes mellitus with hyperglycemia; essential hypertension; hyperlipidemia.

Allergies

Allergies: Sulfonamide (sulfa) antibiotics - rash.

Hospital Course

68-year-old man with type 2 diabetes and hypertension presented with 3 days of fever (Tmax 38.9 C / 102.0 F), productive cough, and dyspnea. SpO2 91% on room air on arrival. Chest X-ray showed right lower lobe consolidation. WBC 14.8, CRP 96. CURB-65 score 1; admitted for oxygen requirement.

Treated with **ceftriaxone 1 g IV daily** and **azithromycin 500 mg IV daily**. Required 2 L nasal cannula oxygen for 48 hours, weaned to room air on hospital day 3. Afebrile since 09/17. Blood cultures negative.

Diabetes: Metformin was **held** on admission due to acute illness and IV contrast consideration; glucose managed with insulin lispro sliding scale (range 160-250 mg/dL). **Metformin resumed at discharge.** Lisinopril and atorvastatin continued throughout.

Condition at Discharge

Stable. SpO2 96% RA, Temp 98.4 F, BP 134/82, HR 84.

Discharge Medications

NEW: **Amoxicillin-clavulanate 875/125 mg by mouth twice daily x 5 days** (last dose 09/24/2024)
RESUMED: Metformin 500 mg by mouth twice daily
CONTINUE: Lisinopril 10 mg by mouth daily
CONTINUE: Atorvastatin 20 mg by mouth nightly
STOPPED: Insulin lispro sliding scale (inpatient only)

Follow-up

1. Primary care (Dr. Emily Carter) within 1-2 weeks.
2. Repeat chest X-ray in 4-6 weeks.
3. Return to ED for fever > 101 F, worsening shortness of breath, or chest pain.
4. Pneumococcal vaccine recommended once recovered.
